Create bootable USB flash drive

Linux

Dd utility

The easiest way. It is recommended to record in this way.

> ⚠️ **Attention**
>
> This will destroy all data on your USB drive!

> 🔥 **Hint**
>
> You can find out the path to the USB device by running the command `lsblk` . Make sure it is not mounted.

```
dd bs = 4M if = / image.iso of = / dev / sd [x]
```

image.iso- the path to the image, `/dev/sd[x]` - the path to the USB device. Use exactly the path `/dev/sdx, not/dev/sdx1`

> ⚠️ **Attention**
>
> Be careful when specifying a USB device. The utility ddwill not ask questions.
